

1980 Vulcan 42' Step deck

VIN # VT562380

Location: Letohatchee, AL

(below Montgomery)

3/8" steel plate floor over step deck encased by cross ties used for hauling tools, tires, or OTM.

30' deck has 60lb rail track and formed / braced diamond plate to create level trailer deck for hauling, a flange-way exists for rail equipment.

60lb 21' ramps 2-sections hinged (9.5' up and 11.5' down) all professionally manufactured and structurally supported.

Trailer was modified to haul 40,000lb Canron Mark-I/II Tamper, regulator, backhoe, cross ties, palletized materials, OTM etc. Trailer designed to load or unload tamper or regulator without road crossing by extending ramps installing 2-pair 60lb joint bars, raising ramps, backing up to RR track at 90 degree angle (perpendicular), lower ramp onto track, drive rail equipment and position center jack over RR track, lower jack and raise RR equipment, pull trailer forward, spin and lower rail equipment onto track. Remove 2-pair of 60lb joints and hydraulically raise ramps to travel position.

Loading backhoe - do not extend ramps, lower ramps and attach two detachable ramps (spacing adjustable side to side).

Pictures show extra materials, rail, OMNI railseal, chains, tool boxes etc not included in sell.

This would be ideal for contractor, equipment manufacturer or major railroad to haul or move rail equipment onsite, job site or derailment not needing a crane to unload.
